SUMMARY

Front-End Developer with a strong eye for design, turning UI concepts into polished, production-ready websites. Skilled at bringing interfaces to life with smooth animations and scroll-triggered interactions for engaging experiences. Comfortable across front-end architecture, from component structure to state management, with solid backend fundamentals for better collaboration. Actively integrates AI into the workflow to build smarter and faster.

EDUCATION

Capital University (Helwan)

Bachelor of Computer Science | GPA: 3.5

Cairo, Egypt

August 2024 – May 2028

Relevant Coursework: Data Structures & Algorithms, Programming (C, Java), Internet Technology, Software Engineering

TECHNICAL DIPLOMAS

Full-Stack Development Diploma

Route

Cairo, Egypt

March 2025 – June 2026

- Built responsive, production-ready web interfaces using HTML5, CSS3, Tailwind CSS, JavaScript, React, TypeScript, and Next.js, following component-driven and accessible design practices.
- Completed 8+ mini-projects and 2 major applications (a social platform and an e-commerce site) to practice state management, client-side routing, and performance optimization.
- Delivered an e-commerce platform as the program's capstone project, applying front-end architecture and backend fundamentals (Node.js, Express, MongoDB/MySQL) to build and consume RESTful APIs end-to-end.

PROFESSIONAL EXPERIENCE

Front-End Developer Intern

Neqabty

Dokki, Egypt

June 2026 – September 2026

- Contributed to an AI-powered claims evaluation feature for a real-world healthcare management system, building the React interface for reviewing and displaying evaluation results.
- Extended existing components with new input fields and UI logic, ensuring consistency with the platform's design patterns, while consuming RESTful APIs to render dynamic, data-driven UI.
- Applied Django, PostgreSQL, and Docker fundamentals to collaborate more effectively with backend developers.

PROJECTS

CornerStone | Next.js, TypeScript, TailwindCSS

- Built a fully responsive e-commerce UI across 15+ routes and 38 reusable components, featuring product browsing, category filtering, and a modern 2025 design system.
- Added smooth animations and scroll interactions with optimized images and fast client-side routing, achieving a 91 PageSpeed performance score.

Spotify Clone App | Next.js, TypeScript, ShadCN, Supabase

- Built a responsive, accessible UI across 26 components using ShadCN and modern Next.js routing to recreate core Spotify features like playlist creation and playback, reaching a 99 PageSpeed performance score.
- Integrated Supabase for authentication and real-time data handling to support playlist management and streaming functionality.

TECHNICAL SKILLS

Front-End: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3

Styling & UI: Tailwind CSS, ShadCN, Bootstrap

Animation & Interaction: Framer Motion, GSAP

Back-End & Databases: Node.js, Express, Django, MongoDB, MySQL, PostgreSQL

Developer Tools: Git, GitHub, Docker, Claude Code

Languages: C, Python, Java
